An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Kevin D. Bailey on 9-2-05.

13. (Currently Amended) A method of removing an oil filter from a filter cap, the oil filter being configured to remove impurities from oil upon passage of the oil through the oil filter comprising the steps of:

removing from a housing of an oil filter assembly said filter cap with said oil filter secured to said filter cap;

moving an actuator which extends through a side wall of said filter cap so as to exert a force on said oil filter after removal of said filter; and

moving said oil filter relative to said side wall in response to said force being exerted on said oil filter.

On line 4 of claim 19, "therein" has been changed to --thereon--.

On line 3 of claim 24, "therein" has been changed to --thereon--.

27. (New) The method of claim 16, wherein:

said oil filter has a post extending therefrom;

said post having a spheroid-shaped member defined therein thereon;

said step of moving said oil filter comprises exerting said force on said spheroid-shaped member; and

said step of moving said filter retainer comprises moving said filter retainer relative to said side wall from the retention position in which said filter retainer retains said spheroid-shaped member to the release position in which said spheroid-shaped member is movable relative to said filter cap in response to said force being exerted on said spheroid-shaped member.

On line 1 of claim 29, "the" has been changed to --a--.

The paragraph on page 1, line 4 of the specification has been amended as follows:

-- This application is a divisional of co-pending U.S. Patent Application No. 10/102,132 which was filed on March 20, 2002, now U.S. Patent 6,770,196, and is hereby incorporated by reference herein. --.

On line 20 of page 5 of the specification, --threadless-- has been inserted before "spring-loaded".

The following is an examiner's statement of reasons for allowance: Luby taken in combination with Kamrath is considered the closest prior art, however, Luby fails to teach or suggest:

The step removing from a housing of an oil filter assembly said filter cap with said oil filter secured to said filter cap as recited in instant claim 13; or

The step of moving each of a plurality of spring arms from a retention position in which said plurality of spring arms cooperate to retain the post to a release position in which said post is moveable relative to said filter cap in response to said force being exerted on said oil filter as recited in claim 17; or

The steps of urging the spheroid-shaped member into contact with each of said plurality of spring arms, and moving each of a plurality of spring arms from a retention position in which the plurality of spring arms cooperate to retain said spheroid-shaped member to a release position in which said post is movable relative to said filter cap in response to the urging step as recited in instant claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
